

What is claimed is:

1. A tubular strip for leisure chair, comprising a hollow tubular body made of a specific pliable PVC material by way of injection molding and having a reduced wall thickness as compared to general tubular strips, and a plurality of axially extended reinforcing ribs integrally molded on an outer surface of said tubular body.
10
2. The tubular strip for leisure chair as claimed in claim 1, wherein said reinforcing ribs are circumferentially equally spaced on said outer surface of said tubular body.
